#### **NEW QUESTION: 1**

Your company has a main office and one branch office. The main office has a print server named Printer1. The branch office has a print server named Printer2. Printer1 manages 15 printers and Printer2 manages seven printers.

You add Printer2 to the Print Management console on Printer1. You need to send an automatic notification when a printer is not available.

What should you do?

- A.** Enable the Show informational notifications for local printers option on both print servers.
- B.** Configure an e-mail notification for the Printers Not Ready printer filter.

C. Configure an e-mail notification for the Printers With Jobs printer filter.

D. Enable the Show informational notifications for network printers option on both print servers.

**Answer: B**

Explanation:

Print Management can help you find printers that have an error condition by using filters. It can also send e-mail notifications or run scripts when a printer or print server needs attention.

- A. Cisco ASA CX
- B. Cisco ESA
- C. Cisco ASA
- D. Cisco WSA

**Answer: A,C**

### NEW QUESTION: 3

Your network contains an Active Directory domain named contoso.com. You currently have an intranet web site that is hosted by two Web servers named Web1 and Web2. Web1 and Web2 run Windows Server 2012. Users use the name intranet.contoso.com to request the web site and use DNS round robin.

You plan to implement the Network Load Balancing (NLB) feature on Web1 and Web2.

You need to recommend changes to the DNS records for the planned implementation.

What should you recommend?

- A. Delete one of the host (A) records named Intranet. Modify the remaining host (A) record named Intranet.
- B. Create one alias (CNAME) record named Intranet. Map the CNAME record to Intranet.
- C. Delete both host (A) records named Intranet. Create a pointer (PTR) record for each Web server.
- D. Create a new host (A) record named Intranet. Remove both host (A) records for Web1 and Web2.

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

We are currently using Round Robin. We therefore have two host

(A) records named "intranet" in DNS:  
one pointing to the IP address of Web1 and one pointing to the IP address of Web2.

To move to Network Load Balancing (NLB), we just need one host (A) record pointing to the NLB cluster IP address. Therefore, the solution is to delete one of the "intranet" host (A) records and point the remaining "intranet" host (A) record to the NLB cluster IP address.
