NEW QUESTION: 1

What are three benefits of implementing VLANs? (Choose three.)

- A.** Port-based VLANs increase switch-port use efficiency, thanks to 802.1Q trunks.
- B.** Broadcast storms can be mitigated by increasing the number of broadcast domains, thus reducing their size.
- C.** Broadcast storms can be mitigated by decreasing the number

of broadcast domains, thus increasing their size.

D. A more efficient use of bandwidth can be achieved allowing many logical networks to use the same network infrastructure.

E. VLANs make it easier for IT staff to configure new logical groups, because the VLANs all belong to the same broadcast domain.

F. A higher level of network security can be reached by separating sensitive data traffic from other network traffic.

G. A more efficient use of bandwidth can be achieved allowing many physical groups to use the same network infrastructure.

Answer: B,D,F

Explanation:

Benefits of VLANs

VLAN is a network structure which allows users to communicate while in different locations by sharing one multicast domain and a single broadcast. They provide numerous networking benefits and have become popular in the market. For instance, it helps reduce administrative costs when users are geographically dispersed.

1. Inexpensive

The popularity of VLANs is due to the fact that changes, adds, and moves can be attained simply by making necessary configurations on the VLAN port. Time-consuming, re-addressing, and host reconfigurations is now a thing of the past, because network configuration can be made at ease when need arises.

2. Better management

A VLAN typically solve the scalability issues that exist in a large network by breaking the main domain into several VLAN groups or smaller broadcast configurations, thereby encourage better control of multicast traffic as well as broadcast domains.

3. Improves network security

High-security can be positioned in different VLAN groups to ensure that non-members cannot receive their broadcasts. On the other hand, a router is added and workgroups relocated into centralized locations.

4. Enhances performance

A more efficient use of bandwidth can be achieved allowing many logical networks to use the same network infrastructure.

5. Segment multiple networks

VLANs are typically used to achieve multiple purposes. They are popularly used to reduce broadcast traffic. Each VLAN creates a separate, smaller broadcast domain.

6. Better administration

VLANs facilitate grouping of multiple geographical stations. When VLAN users move to another physical location, the network does not have to be configured.
