You need to create a JSON-formatted text file for AWS CloudFormation. This is your first template and the only thing

you know is that the templates include several major sections but there is only one that is required for it to work. What is the only section required?

- A. Outputs
- B. Conditions
- C. Mappings
- D. Resources

**Answer: D**

Explanation:

AWS CloudFormation is a service that helps you model and set up your Amazon Web Services resources so that you can spend less time managing those resources and more time focusing on your applications that run in AWS. You create a template that describes all the AWS resources that you want (like Amazon EC2 instances or Amazon RDS DB instances), and AWS CloudFormation takes care of provisioning and configuring those resources for you.

A template is a JSON-formatted text file that describes your AWS infrastructure. Templates include several major sections. The Resources section is the only section that is required. The first character in the template must be an open brace (`{`), and the last character must be a closed brace (`}`). The following template fragment shows the template structure and sections.
