**NEW QUESTION: 2**

Which of the following is a valid SQL query to display the number of active sessions for each user group?

**A.** SELECT user\_group, COUNT(\*) FROM v\$session;

**B.** SELECT user\_group, COUNT(\*) FROM v\$session WHERE active\_session = 'Y';

**C.** SELECT user\_group, COUNT(\*) FROM v\$session WHERE active\_session = 'Y' GROUP BY user\_group;

**D.** SELECT user\_group, COUNT(\*) FROM v\$session WHERE active\_session = 'Y' GROUP BY user\_group, COUNT(\*);

**Answer: C**

**NEW QUESTION: 3**

Which of the following is a valid SQL query to display the number of active sessions for each user group?

```
SELECT user_group, COUNT(*) FROM v$session WHERE active_session = 'Y' GROUP BY user_group;
```

Which of the following is a valid SQL query to display the number of active sessions for each user group?

**A.** CPU\_WAIT\_TIME

Which of the following is a valid SQL query to display the number of active sessions for each user group?

**B.**

#### NEW QUESTION: 4

A network administrator is configuring several HP Comware switches as an HP Intelligent Resilient Framework (IRF) virtual device. According to best practices at, which point during the IRF configuration process should the administrator activate the IRF ports?

- A. After configuring IRF ports but before assigning physical interfaces to them
- B. After enabling the physical interfaces that are assigned to IRF ports and saving the settings
- C. Before configuring IRF ports or assigning physical interfaces to them
- D. After enabling the physical interfaces that are assigned to IRF ports but before saving the settings

**Answer: B**

Explanation:

(see steps 5 and 6 below) Use the `theirf-port-configuration active` command to activate configurations on all IRF ports on the device. When you physically connect members of an IRF virtual device and bind physical IRF port(s) to an IRF port whose link state is `DIS` or `DOWN`, which you can display with the `display irf topology` command, execution of this command is required to establish the IRF virtual device. Note that activating IRF port configurations may cause merge of IRF virtual devices and automatic device reboot. Therefore, to avoid configuration loss you are recommended to set the member ID for the device in the following way: 1) Plan the network and member IDs in advance. Determine the number of IRF ports to be created, and which physical IRF ports is used for IRF virtual device establishment. 2) Change member IDs. (Member ID change takes effective after device reboot, so change member IDs before executing `theirf-port-configuration active` command.) 3) Connect SFP+ cables or fibers and make sure that the physical IRF ports are well connected. 4) Create IRF ports.

- 5) Bind physical IRF ports to IRF ports.
- 6) Save the current configurations to the configuration file to be used at the next startup.
- 7) Activate configurations on all IRF ports.

When the system starts up, if you bind a physical IRF port to an IRF port through the configuration file, or add a new physical port, configurations on IRF ports are automatically activated without the need to execute this command again.
