NEW QUESTION: 1

How can a user configure three termination policies for the AutoScaling group?

- A. The user cannot specify more than two policies for AutoScaling
- B. Define multiple policies in random order
- C. Define multiple policies in the ordered list
- D. Keep updating the AutoScaling group with each policy

Answer: C

Explanation:

To configure the Auto Scaling termination policy, the user can either specify any one of the policies as a standalone policy or list multiple policies in an ordered list. The policies are executed in the order that they are listed.

NEW QUESTION: 2

Which of the following is included in a compliance audit?

- A. Analyzing the provider release calendar
- B. Analyzing identity management and access controls
- C. Analyzing chargeback agreements
- D. Analyzing cloud provider Service Level Agreements (SLAs)

Answer: B

NEW QUESTION: 3

Answer:

Explanation:

Explanation

Step 1: Download the OVA file for the collection appliance
Azure Migrate uses an on-premises VM called the collector appliance, to discover information about your on-premises machines. To create the appliance, you download a setup file in Open Virtualization Appliance (.ova) format, and import it as a VM on your on-premises vCenter Server.

Step 2: Create a migration group in the project

For the purposes of assessment, you gather the discovered VMs into groups. For example, you might group VMs that run the same application. For more precise grouping, you can use dependency visualization to view dependencies of a specific machine, or for all machines in a group and refine the group.

Step 3: Create an assessment in the project

After a group is defined, you create an assessment for it.
