This is because it can really help students [Nuage Networks Virtualized Cloud Services \(VCS\) Operations](#) to save a lot of time, and ensure that everyone pass the exam successfully.

NEW QUESTION: 1

The capital asset pricing model suggests using the factor called to measure risk.

- A. Index
- B. Alpha
- C. Beta
- D. Key

Answer: C

NEW QUESTION: 2

A retail chain is planning to create a wireless network to support checkout registers.

Which three actions are mandatory, in order to ensure that the wireless network is PCI-compliant? (Choose three.)

- A. enable WPA
- B. install a Cisco Wireless LAN Controller and firewall at each store
- C. change default passwords and community strings
- D. disable broadcasting of the SSID
- E. install PKI certificates on client devices
- F. install an overlay WIPS system

Answer: A,C,D

NEW QUESTION: 3

Consider the following commands:

What is displayed when this sequence of commands is executed using the bash shell?

- A. cat: cannot open file1
- B. Hello,world
- C. cat: cannot open file1 Hello,World
- D. bash: syntax error near unexpected token '&&'
- E. cat: cannot open file1Hello,world

Answer: A

Explanation:

First line (rm file1) deletes/removes file1.

Second line captures the text into file2.

The first part of line 3 (cat file1) fails as the file1 does not exist.

The && (AND) operator will ensure that the third line fails. The result of line 3 will be the result of first part of line 3 (cat file1).

Note: cat - concatenate files and print on the standard output

Note #1: A list is a sequence of one or more pipelines separated by one of the operators

';', '&', '&&', or '||', and optionally terminated by one of ';', '&', or a newline.

Of these list operators, '&&' and '||' have equal precedence, followed by ';' and '&', which have equal precedence.

AND and OR lists are sequences of one or more pipelines separated by the control

operators '&&' and '||', respectively. AND and OR lists are executed with left associativity. An AND list has the form command1 && command2

command2 is executed if, and only if, command1 returns an exit status of zero. An OR list has the form command1 || command2

command2 is executed if, and only if, command1 returns a non-zero exit status.

The return status of AND and OR lists is the exit status of the last command executed in the list. Note #2 (on exit status):

Zero means command executed successfully,if exit status returns non-zero value then your command failed to execute.
