NEW QUESTION: 1

Sie haben eine Data-Warehouse-Faktentabelle mit einem Clustered-Columnstore-Index.

Sie haben mehrere CSV-Dateien mit insgesamt 3 Millionen Datenzeilen.

Sie müssen die Daten in die Faktentabelle hochladen. Die Lösung muss die Delta-Gruppe vermeiden, wenn Sie die Daten importieren.

Welche Lösung erreicht das Ziel in kürzester Zeit?

- A. Laden Sie die Quelldaten in die Faktentabelle, indem Sie bcp.exe ausführen und die Option `_ Tablock` angeben.
- B. Laden Sie die Quelldaten in eine Staging-Tabelle. Laden Sie die Daten mithilfe der Anweisung `insert_select` in die Faktentabelle und geben Sie die `Tablock`-Option in der Staging-Tabelle an.
- C. Laden Sie die Quelldaten in eine Staging-Tabelle mit einem Clustered-Index für den Primärschlüssel. Kopieren Sie die Daten mit der Anweisung `insert_select` in die Faktentabelle.
- D. Laden Sie die Quelldaten mithilfe der Bulk-Insert-Anweisung in die Faktentabelle und geben Sie die `Tablock`-Option an.

Answer: C

Explanation:

Explanation

If you are loading data only to stage it before running more transformations, loading the table to heap table will be much faster than loading the data to a clustered columnstore table. In addition, loading data to a [temporary table][Temporary] will also load much faster than loading a table to permanent storage.

A common pattern for data load is to load the data into a staging table, do some transformation and then load it into the target table using the following command `INSERT INTO <columnstore index> SELECT <list of columns> FROM <Staging Table>`. This command loads the data into the columnstore index in similar ways to BCP or Bulk Insert but in a single batch. If the number of rows in the staging table < 102400, the rows are loaded into a delta rowgroup otherwise the rows are directly loaded into compressed rowgroup. One key limitation was that this INSERT operation was single threaded. To load data in parallel, you could create multiple staging table or issue `INSERT/SELECT` with non-overlapping ranges of rows from the staging table. This limitation goes away with SQL Server 2016 (13.x). The command below loads the data from staging table in parallel but you will need to specify `TABLOCK`.
