#### **NEW QUESTION: 1**

What percentage of bandwidth is reduced when a stack cable is broken?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

Physical Sequential Linkage

The switches are physically connected sequentially, as shown in Figure 3. A break in any one of the cables will result in the stack bandwidth being reduced to half of its full capacity. Subsecond timing mechanisms detect traffic problems and immediately institute failover. This mechanism restores dual path flow when the timing mechanisms detect renewed activity on the cable.

**NEW QUESTION: 2**

Refer to the exhibit.

Under which component is the TX9000 configuration restored to factory configuration?

- A. Telephony Settings
- B. IP Settings
- C. Unified CM Settings
- D. System Settings
- E. Network Settings
- F. Configuration Issues

**Answer: F**

**NEW QUESTION: 3**

Another type of artificial intelligence technology involves genetic algorithms. Genetic algorithms are part of the general class known as:

- A. Biological computing
- B. Neural networks
- C. Evolutionary computing
- D. Suboptimal computing

**Answer: C**

Explanation:

Evolutionary computing uses the Darwinian principles of survival of the fittest, mutation, and the adaptation of successive generations of populations to their environment. The genetic algorithm implements

this process through iteration of generations of a constant-size population of items or individuals. Each individual is characterized by a finite string of symbols called genomes. The genomes are used to represent possible solutions to a problem in a fixed search space. For example, if the fixed population of the first generation of individuals

consists of random binary numbers, and the problem is to find the minimum binary number that can be represented by an individual, each binary number is assigned a fitness value based on the individuals binary number value. The smaller the binary number represented by a parent individual, the higher level of fitness that is assigned to it. Through cross breeding among the numbers (known as crossover), mutations of the numbers, and pairing of numbers with high fitness ratings, the smallest value that can be represented by the number of bits in the binary number will emerge in later generations.

\*Answer neural networks, is incorrect and has been discussed extensively in previous questions in this chapter.

\*Answer Suboptimal computing is a distracter and answer biological computing, refers to computation performed by using certain characteristics of living organisms.
