**NEW QUESTION: 3**

A company plans to implement an Office 365 environment to manage email.

All user accounts must be configured to use only a custom domain.

You need to provision an Office 365 tenant for the company. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

Explanation

Box 1:

Box 2:

Configure the global administrator account recovery information

Box 3:

The tenant is your Office 365 account, including hosted Exchange, Skype for Business, SharePoint, and your Office 365 Active Directory. The first account that you create when you first purchase Office 365 is the "owner" of your tenant. This account should be an admin account, not a person. This account does not normally require an Office 365 license. Relating to SharePoint, all of your site collections are within your tenant. You can have any number of domains within your tenant (with e-mail accounts), but you will have only one root SharePoint URL: <https://xxxx.sharepoint.com>. The Global Administrator account is similar to the Company administrator. Users in this role have access to everything or

the permission to add them to a dedicated role where they do not have permission (such as discovery management and assigning administrative roles to other users).

When setting up Office 365 the first step is to purchase your subscription which includes choosing the plan.

Step 2 involves the selection of the sign-on method and this is where the global administrator account is of consequence. Step 3 involves the collecting of information such as domain names and DNS, locations, etc...

Step 4 is the actual migration plan and schedule, step 5 - the Microsoft account and organizational account, step 6 - the SkyDrive and SkyDrive Pro, and step 7 - the Windows Intune section.

Thus you should perform step 1 through 3 to ensure that all user accounts to make use of a custom domain for their e-mail.
