Do you want achievements in the AZ-120 exam in just one try, If you are determined to purchase our Microsoft AZ-120 test simulate materials, please prepare a credit card for payment.

If time be of all things the most precious (AZ-120 exam cram), wasting of time must be the greatest prodigality, our company has placed high premium on the speed of delivery.

#### **NEW QUESTION: 1**

What is the minimum number of TCP sessions needed to complete a H.323 call between two H.323 gateways using slow start?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

**Answer: B**

Explanation:

Explanation

H.323 has two modes of operation: slow start and fast start. The initiation of a call may proceed in a slow start or fast start in H.323. In a slow start, H.323 signaling consists of

Setup, Call Proceeding, Alerting, and Connect steps. After these steps, the H.245 media negotiation is performed. When a call is initiated in H.323 fast start, the H.245 media negotiation is performed within the initial Setup message. With slow start, multiple TCP connections are needed for an H.323 call, such as one H.225 signaling channel and one H.245 signaling channel if required (minimum of these two).

**NEW QUESTION: 2**

The point (6, 3) could be the midpoint of which of the following lines?

- A. a line with endpoints at (3,3) and (12,6)
- B. a line with endpoints at (2,3) and (6,1)
- C. a line with endpoints at (6,3) and (6,3)
- D. a line with endpoints at (6,0) and (6,6)
- E. a line with endpoints at (0,1) and (12,2)

**Answer: D**

Explanation:

Explanation/Reference:

The midpoint of a line is equal to the average of the x-coordinates and the average of the y-coordinates of the endpoints of the line. The midpoint of the line with endpoints at (0,1) and (12,2) is (6, 3).

**NEW QUESTION: 3**

Which two dashboard components are populated with data from the grand total of a custom report?

Choose 2 answers

- A. Metric
- B. Gauge
- C. Table
- D. Chart

**Answer: A,B**

**NEW QUESTION: 4**

You are developing a library to support multiple ASP.NET MVC web applications on a shared server. The library provides implementations of security algorithms. If a problem with any of the security algorithms is discovered, a new version of the library must be created and deployed. Application downtime during the update must be minimized. You need to ensure that the new version of the library will be used by all applications as soon as possible. What should you do?

- A. Install the security assembly in the Global Assembly Cache (GAC). When an update is needed, update the assembly in the GAC.

- B.** Sign all assemblies in each application with the same key used to sign the security assembly. When an update is needed, create a new key pair and re-sign all assemblies.
- C.** Build the web applications and include the security assembly as an embedded resource. When an update is needed, copy the new assembly to the bin directory for the application.
- D.** Build the security assembly as a netmodule in a shared location. Use the assembly linker to merge the netmodule into the assemblies for the application. When an update is needed, update the netmodule in the shared location.

**Answer: A**
