NEW QUESTION: 1

With speculative investments like oil wells and horse races, money is more easily made or lost; the gain is _____ with the risk.

- A. equal
- B. less
- C. better
- D. greater

E. commensurate

Answer: E

Explanation:

Explanation/Reference:

Explanation:

In speculation, a gain is not necessarily greater or less or better with risk. It may occasionally be equal with the risk, but it is most usually commensurate (corresponding in extent of degree) with it.

NEW QUESTION: 2

Part of your task is to set up and maintain goals alignment against organization objectives. If you delete or cancel a goal, additional work is needed to complete the deletion or cancellation process.

Which two statements are true?

A. When you cancel an organization goal, the alignment to other goals is not removed. Owners of the goal can then cancel or modify their own goals, align their goals to other goals, or leave the alignment as it is.

B. If you delete an organization goal, you cannot remove the alignment between it and any goals that were aligned to it.

C. If you delete an organization goal, you remove the alignment between it and any goals that were aligned to it.

D. When you cancel an organization goal, the alignment to other goals is not removed. Owners of goals that are aligned to the canceled goal receive email notification that the goal they aligned to is canceled.

They can then cancel or modify their own goals, align their goals to other goals, or leave the alignment as it is.

NEW QUESTION: 3

You have a computer named Computer1 that runs Windows 7. You have a server named Server1 that runs Windows Server 2008. Computer1 and Server1 have IPv4 and IPv6 installed.

You need to identify whether you can connect to Server1 by using IPv6.

What should you do?

A. Run Ping Server1 -6.

B. Open \\server1 from the Run dialog box.

C. Run Ping Server1- n 6.

D. Run Net view \\Server1.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

The Ping tool is still widely used, although more firewalls block Internet Control Message Protocol (ICMP) echo requests than used to be the case. However, even if you cannot get past a firewall on your organization's network, Ping is still useful. You can check that the IPv4 protocol is working on a computer by entering ping 127.0.0.1. You can then ping the IPv4 address of the computer. You can find out what this is by using the Ipconfig tool. If your computer has more than one interface combined in a network bridge, you can ping the Ipv4 address of the network bridge. When you have established that you can ping your computer using an Ipv4 address, you can test that DNS is working internally on your network (assuming you are connected to a DNS server, a WAP, or have ICS configured on your network) by pinging your computer name-for example, entering ping canberra. Note that if DNS is not implemented on your system, ping canberra still works because the IPv6link-local address resolves automatically.

-6Force using IPv6.
