**Answer: C**

#### NEW QUESTION: 4

You need to move a file titled "weblogs" into HDFS. When you try to copy the file, you can't. You know you have ample space on your DataNodes. Which action should you take to relieve this situation and store more files in HDFS?

- A.** Decrease the block size on all current files in HDFS.
- B.** Increase the amount of memory for the NameNode.
- C.** Increase the block size on your remaining files.
- D.** Increase the block size on all current files in HDFS.
- E.** Decrease the block size on your remaining files.
- F.** Increase the number of disks (or size) for the NameNode.

**Answer: E**

Explanation:

Explanation/Reference:

Note:

\* -put localSrc destCopies the file or directory from the local file system identified by localSrc to dest within the DFS.

\* What is HDFS Block size? How is it different from traditional file system block size?

In HDFS data is split into blocks and distributed across multiple nodes in the cluster. Each block is typically 64Mb or 128Mb in size. Each block is replicated multiple times. Default is to replicate each block three times. Replicas are stored on different nodes. HDFS utilizes the local file system to store each HDFS block as a separate file. HDFS Block size can not be compared with the traditional file system block size.
