Host Agent - When you deploy SLB, you must use System Center, Windows PowerShell, or another management application to deploy the SLB Host Agent on every Hyper-V host computer. You can install the SLB Host Agent on all versions of Windows Server 2016 that provide Hyper-V support, including Nano Server. SLB MUX - Part of the Software Load Balancer (SLB) on Windows Server 2016, the SLB MUX processes inbound network traffic and maps VIPs (virtual IPs) to DIPs (datacenter IPs), then forwards the traffic to the correct DIP. Each MUX also uses BGP to publish VIP routes to edge routers. BGP Keep Alive notifies MUXes when a MUX fails, which allows active MUXes to redistribute the load

in case of a MUX failure - essentially providing load balancing for the load balancers.
