#### **NEW QUESTION: 2**

- A. Option C
- B. Option B
- C. Option D
- D. Option A

**Answer: D**

#### **NEW QUESTION: 3**

- A. Option C
- B. Option E
- C. Option F
- D. Option D
- E. Option B
- F. Option A

**Answer: D,F**

Explanation:

Explanation

SDLC stands for systems development life cycle. An agile project is completed in small sections called iterations. Each iteration is reviewed and critiqued by the project team. Insights gained from the critique of an iteration are used to determine what the next step should be in the project. Each project iteration is typically scheduled to be completed within two weeks.

Static and dynamic security analysis should be performed throughout the project. Static program analysis is the analysis of computer software that is performed without actually executing programs (analysis performed on executing programs is known as dynamic analysis). In most cases the analysis is performed on some version of the source code, and in the other cases, some form of the object code.

For each major iteration penetration testing is performed. The output of a major iteration will be a functioning part of the application. This should be penetration tested to ensure security of the application.
