**Answer: D**

**NEW QUESTION: 4**

An ecommerce company has noticed performance degradation of its Amazon RDS based web application. The performance degradation is attribute to an increase in the number of read-only SQL queries triggered by business analysts. A solution architect needs to solve the problem with minimal changes to the existing web application.

What should the solution architect recommend?

- A.** Load the data into Amazon ElasticCache and have the business analysts run their queries.
- B.** Copy the data into an Amazon Redshift cluster and have the business analysts run their queries.
- C.** Export the data to Amazon DynamoDB and have the business analysts run their queries.
- D.** Create a read replica of the primary database and have the business analysts run their queries.

**Answer: D**
