Answer: D

Explanation:

Explanation

A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. It enables the user to launch AWS resources into a virtual network that the user has defined. An Elastic Network Interface (ENI) is a virtual network interface that the user can attach to an instance in a VPC. The user can create a management network using two separate network interfaces. For the present scenario it is required that the secondary network interface on the instance handles the public facing traffic and the primary network interface handles the back-end management traffic and it is connected to a separate subnet in the VPC that has more restrictive access controls. The public facing interface, which may or may not be behind a load balancer, has an associated security group to allow access to the server from the internet while the private facing interface has an associated security group allowing SSH access only from an allowed range of IP addresses either within the VPC or from the internet, a private subnet within the VPC or a virtual private gateway.

NEW QUESTION: 3

Your company has a SharePoint Server farm. All servers are virtualized on a Hyper-V host. The company has a single data center.

You need to design a disaster recovery solution. The solution must meet the following requirements:

If the data center fails, SharePoint Server services must be recoverable within 24 hours.

Up to one hour of data can be lost.

Costs must be minimized during normal operations.

Which technology best meets the requirements? More than one answer choice may achieve the goal.

- A. the OneDrive sync client
- B. Azure Site Recovery
- C. Hyper-V synchronous replication
- D. the SharePoint Migration Tool

Answer: B

Explanation:

Testlet 1

Overview

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed

on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Existing Environment

Active Directory

The network contains an Active Directory forest named litwareinc.com. The forest contains a single domain. All domain controllers run Windows Server 2016.

SharePoint Server Environment

Litware has a SharePoint Server 2019 farm that contains the servers shown in the following table.

Central Administration has a URL of <http://spweb1.litwareinc.com>.

The HR department currently uses a SharePoint web application that uses only forms authentication.

The sales department has a SharePoint site that is available anonymously to display product information.

Line-of-Business Application

You have a line-of-business application named LOBApp. LOBApp stores content in a SQL Server database named LOBAppDB.

LOBApp has a service account named LobAppSA.

Problem Statements

Litware identifies the following issues:

None of the SharePoint sites use TLS.

The Distributed Cache Problem service uses the farm account.

When users perform searches from the SharePoint site of the HR department, they receive no results.

You discover that the user names and passwords configured for managed services were transmitted

on the network in plain text.

Requirements

Business Goals

All the components in the SharePoint Server farm must be highly available by using the least number of servers possible.

Each document stored in the HR department site must have the following pieces of metadata: CONID, CONNO, CONDate, and CONApproved.

Security

The farm uses the managed service accounts shown in the following table.

Technical Requirements

Litware identifies the following technical requirements:

LOBApp content must be visible in search results.

The principle of least privilege must be used whenever possible.

All SharePoint service applications must use the SpServices

account.

Information for each product must be displayed as a separate webpage for the sales department.

Search crawling must start every 10 minutes, regardless of whether the prior session is complete.

The Cloud Search Service Application must crawl on-premises content in a cloud hybrid search

solution.

The Secure Store Service application must use LitwareAppID as the target application to access

LOBAppDB.

NEW QUESTION: 4

A DHCP server supports various types of address allocation policies to meet different requirements. Which of the following is not a correct address allocation policy?

- A. Manual allocation
- B. Dynamic allocation
- C. Duplicated allocation
- D. Automatic allocation

Answer: C
