**NEW QUESTION: 1**

Which three statements are true concerning unplugging a pluggable database (PDB)? (Choose three.)

- A. The unplugged PDB becomes a non-CDB.
- B. The PDB data files are automatically removed from disk.
- C. The unplugged PDB can be plugged into another CDB.
- D. The PDB must be dosed.
- E. The unplugged PDB can be plugged into the same multitenant container database (CDB)
- F. The PDB must be open in read only mode.

**Answer: C,D,E**

Explanation:

B, not A: The PDB must be closed before unplugging it.

D: An unplugged PDB contains data dictionary tables, and some of the columns in these encode information in an endianness-sensitive way. There is no supported way to handle the conversion of such columns automatically. This means, quite simply, that an unplugged PDB cannot be moved across an endianness difference.

E (not F): To exploit the new unplug/plug paradigm for patching the Oracle version most effectively, the source and destination CDBs should share a filesystem so that the PDB's datafiles can remain in place.
