NEW QUESTION: 1

You are using the Microsoft Visual Studio Scrum process template. You recently finished a sprint.

You need to conduct a retrospective meeting prior to planning the next sprint.

What should you do?

- A.** Analyze items in the product backlog for the next sprint.
- B.** Analyze the previous sprint to identify what the team is going to do differently during the next sprint
- C.** Determine which items have been finished on the previous sprint.
- D.** Analyze and revise the story points of the work items completed in the previous sprint.

Answer: B

Explanation:

The Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. The purpose of the Sprint Retrospective is to: Inspect how the last Sprint went with regards to people, relationships, process, and tools; Identify and order the major items that went well and potential improvements; and, Create a plan for implementing improvements to the way the Scrum Team does its work. Sprint Retrospectives are used by teams to deliberately improve. Effective Sprint Retrospectives are an important ingredient in helping good teams become great and great teams sustain themselves.

NEW QUESTION: 2

A developer needs periodic access to cloud compute resource to test production system updates and enhancements. What option allows the IT organizations to optimize cloud compute resource utilization?

- A. Submit a chargeback request to utilize cloud compute resources
- B. Submit IT request to leverage existing internal resources
- C. Establish a fixed contract with a cloud service provider
- D. Establish a pay-per use contract with a cloud service provider

Answer: D

NEW QUESTION: 3

You are creating a class library that will be used in a web application.

You need to ensure that the class library assembly is strongly named.

What should you do?

- A. Use the EdmGen.exe command-line tool.
- B. Use the aspnet_regiis.exe command-line tool.
- C. Use the AL.exe command-line tool.
- D. Use the csc.exe /target:Library option when building the application.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The Windows Software Development Kit (SDK) provides several ways to sign an assembly with a strong name:

Using the Assembly Linker (AL.exe) provided by the Windows SDK.

Using assembly attributes to insert the strong name information in your code. You can use either the

AssemblyKeyFileAttribute or the AssemblyKeyNameAttribute, depending on where the key file to be used is located.

Using compiler options such /keyfile or /delaysign in C# and Visual Basic, or the /KEYFILE or /

DELAYSIGN linker option in C++. (For information on delay signing, see Delay Signing an Assembly.) Note:

A strong name consists of the assembly's identity-its simple text name, version number, and culture information (if provided)-plus a public key and a digital signature. It is generated from an assembly file (the file that contains the assembly manifest, which in turn contains the names and hashes

of all the files that make up the assembly), using the corresponding private key. Microsoft® Visual Studio® .NET and other development tools provided in the .NET Framework SDK can assign strong names to an assembly. Assemblies with the same strong name are expected to be identical.
