NEW QUESTION: 1

Your network contains an Active Directory forest named contoso.com. The forest contains the domain controllers configured as shown in the following table.

You plan to deploy an Exchange Server 2013 organization to the forest

A company policy prevents administrators from logging on to DC2 to perform installations.

You need to prepare the Active Directory schema for the planned Exchange Server deployment.

You verify that your user account has all the required permissions to achieve the task. The solution must minimize changes to the Active Directory infrastructure.

- A. Deploy a member server to contoso.com, and then move the server to the West site. Run adprep.exe from the member server.
- B. Log on to any server in the West site, and then run Exchange setup.
- C. Log on to DC3 and then run Exchange setup.
- D. Move the schema master role to DC1, and then run Exchange setup.

Answer: D

NEW QUESTION: 2

HOTSPOT - (Topic 5)

Your network contains one Active Directory domain. The domain contains a deployment of

Microsoft System Center 2012 R2 Configuration Manager that is integrated with Windows

Intune. All client computers and devices are managed by using Configuration Manager.

The domain contains the client computers configured as shown in the following table.

Computer1 and Computer2 are members of a collection named Collection 1.

The users have the devices configured as shown in the following table.

When the users work remotely, they access the company resources by using Remote

Desktop Gateway (RD Gateway).

You create a remote connection profile that allows remote connections. You deploy the profile to Collection1.

You need to identify whether User1 and User2 can use Remote Desktop from their device to connect to Computer1 and Computer2.

What should you identify? To answer, select the appropriate options in the answer area.

Answer:

Explanation:
