A. Sprint Planning
B. Project Retrospective
C. Release Planning
D. Steering Committee
Answer: C
Explanation:
Explanation/Reference:
Explanation:

NEW QUESTION: 3
A Solutions Architect must migrate a monolithic on-premises application to AWS. It is a web application with a load balancer, web server, application server, and relational database. The key requirement driving the migration is that the application should perform better and be more elastic.
Which of the following architectures would meet these requirements?
A. Re-architect the application as Service Oriented Architecture (SOA). Run database and application servers on-premises. Run web-facing EC2 servers. Use an Enterprise Service Bus to handle communications between different parts of the application running on-premises and in the cloud.
B. Re-platform the application as a three-tier application. Use Elastic Load Balancing for incoming requests. Use EC2 for web and application tiers. Use RDS at the database tier. Use CloudWatch alarms and Auto Scaling for horizontal scaling at the web tier.
C. Re-host the application on Amazon EC2 with lift and shift of existing application code. Configure an Elastic Load Balancing load balancer to handle incoming requests.
Use Amazon CloudWatch alarms to receive notification of scaling issues. Increase and decrease the size of the Amazon EC2 instances using AWS CLI or AWS Management Console as required.
D. Re-architect the application as a three-tier application. Move the database to Amazon RDS. Use read replicas and Amazon ElastiCache with RDS for better performance. Use an Application

Load Balancer to forward incoming requests to web and application servers running on-premises.
Answer: B

NEW QUESTION: 4
Refer to the exhibit. What sequence of command would generate the given output?

A. Exhibit C
B. Exhibit A
C. Exhibit B
D. Exhibit D
Answer: A
