The solution should be able to track sales performance by territory and salesperson. The solution should also be able to track sales performance by product line and salesperson. The solution should be able to track sales performance by salesperson and salesperson.

A. AWS

Lambda is a serverless compute service that executes your code in response to events and automatically manages the underlying compute resources for you. Lambda is a serverless compute service that executes your code in response to events and automatically manages the underlying compute resources for you.

B. AWS

Lambda is a serverless compute service that executes your code in response to events and automatically manages the underlying compute resources for you. Lambda is a serverless compute service that executes your code in response to events and automatically manages the underlying compute resources for you.

C. AWS

Lambda is a serverless compute service that executes your code in response to events and automatically manages the underlying compute resources for you. Lambda is a serverless compute service that executes your code in response to events and automatically manages the underlying compute resources for you.

Answer: A

NEW QUESTION: 3

SIMULATION

You have a database that contains the following tables.

You need to create a query that lists the highest-performing salespersons based on the current year-to-date sales period. The query must meet the following requirements:

Return the LastName and SalesYTD for the three salespersons with the highest year-to-date sales

values.

Exclude salespersons that have no value for TerritoryID.

Construct the query using the following guidelines:

Use the first letter of a table name as the table alias.

Use two-part column names.

Do not surround object names with square brackets.

Do not use implicit joins.

Use only single quotes for literal text.

Use aliases only if required.

Part of the correct Transact-SQL has been provided in the answer area below. Enter the code in the answer area that resolves the problem and meets the stated goals or requirements. You can add code within the code that has been provided as well as below it.

```
1 SELECT top 3 lastname,salesYTD
2 FROM Person AS p INNER JOIN SalesPerson AS s
3 ON p.PersonID = s.SalesPersonID
4 WHERE territoryid is null
5 order by salesytd dsec
```

Use the Check Syntax button to verify your work. Any syntax or spelling errors will be reported by line and character position.

Answer:

Explanation:

Please see explanation

Explanation/Reference:

Explanation:

```
1 SELECT top 3 lastname,salesYTD
2 FROM Person AS p INNER JOIN SalesPerson AS s
3 ON p.PersonID = s.SalesPersonID
4 WHERE territoryid is not null
5 order by salesytd desc
```

Note:

On line 4 add a not before null.

On line 5 change dsec to desc.
