NEW QUESTION: 2

HOTSPOT

Select the items that correspond to RIPv1 or RIPv2.

Answer:

Explanation:

Explanation:

CHANGE THE ABOVE ANSWER FIRST QUESTION TO RIPv2 only. Default for Provision switch is RIPv2 only.

NEW QUESTION: 3

What improvement does EAP-FASTv2 provide over EAP-FAST?

A. It supports more secure encryption protocols.

B. It addresses security vulnerabilities found in the original protocol.

C. It allows multiple credentials to be passed in a single EAP exchange.

D. It allows faster authentication by using fewer packets.

Answer: C

Explanation:

As an enhancement to EAP-FAST, a differentiation was made to have a User PAC and a Machine PAC.

After a successful machine-authentication, ISE will issue a Machine-PAC to the client. Then, when processing a user-authentication, ISE will request the Machine-PAC to prove that the machine was successfully authenticated, too. This is the first time in 802.1X history that multiple credentials have been able to be authenticated within a single EAP transaction, and it is known as "EAP Chaining".
