NEW QUESTION: 1

A network technician has been tasked to configure a new network monitoring tool that will examine interface settings throughout various network devices. Which of the following would need to be configured on each network device to provide that

information in a secure manner?

- A. RSH
- B. SNMPv3
- C. PGP
- D. SYSLOG
- E. S/MIME

Answer: B

Explanation:

Explanation

The network monitoring need to use a network management protocol. SNMP has become the de facto standard of network management protocols. The security weaknesses of SNMPv1 and SNMPv2c are addressed in SNMPv3.

NEW QUESTION: 2

Azure Active Directory

AD is a cloud-based directory service that can be used to manage users and resources in Azure.

AD can be used to manage users and resources in Windows.

AD can be used to manage users and resources in Azure.

AD can be used to manage users and resources in Microsoft SQL Server.

Azure

AD can be used to manage users and resources in Azure.

AD can be used to manage users and resources in Azure.

AD can be used to manage users and resources in Microsoft SQL Server.

Management

AD can be used to manage users and resources in Microsoft SQL Server.

AD can be used to manage users and resources in Active

Directory.

AD can be used to manage users and resources in Active Directory.

AD can be used to manage users and resources in Active Directory.

AD can be used to manage users and resources in Active Directory.

A. SQL Login

B. Active Directory - Password

C. Active Directory - Integrated

D. Active Directory - Universal with MFA support

Answer: C

Explanation:

Explanation

Azure AD can be the initial Azure AD managed domain. Azure AD can also be an on-premises Active Directory Domain Services that is federated with the Azure AD.

Using an Azure AD identity to connect using SSMS or SSDT

The following procedures show you how to connect to a SQL database with an Azure AD identity using SQL Server Management Studio or SQL Server Database Tools.

Active Directory integrated authentication

Use this method if you are logged in to Windows using your Azure Active Directory credentials from a federated domain.
1. Start Management Studio or Data Tools and in the Connect to Server (or Connect to Database Engine) dialog box, in the Authentication box, select Active Directory - Integrated. No password is needed or can be entered because your existing credentials will be presented for the connection.

2. Select the Options button, and on the Connection Properties page, in the Connect to database box, type the name of the user database you want to connect to. (The AD domain name or tenant ID" option is only supported for Universal with MFA connection options, otherwise it is greyed out.)
