NEW QUESTION: 2

Which of the following is the MOST important objective of the information system control?

A. Safeguarding assets

B. Developing business continuity and disaster recovery plans

C. Ensuring effective and efficient operations

D. Explanation:

The basic purpose of Information System control in an organization is to ensure that the business objectives are achieved and undesired risk events are detected and corrected. Some of the IS control objectives are given below :

Safeguarding assets
Assuring integrity of sensitive and critical application system environments
Assuring integrity of general operating system
Ensuring effective and efficient operations
Fulfilling user requirements, organizational policies and procedures, and applicable laws and regulations
Changing management
Developing business continuity and disaster recovery plans
Developing incident response and handling plans
Hence the most important objective is to ensure that business objectives are achieved and undesired risk events are detected and corrected.

E. Business objectives are achieved and undesired risk events are detected and corrected

Answer: E

Explanation:

D, and C are incorrect. These are also the objectives of the information system control but are not the best answer.

NEW QUESTION: 3

AWS IAM SAML OldC
1AM
AWS IAM SAML OldC

- A. AWS IAM SAML OldC
- B. 1AM
- C. AWS IAM SAML OldC
- D. AWS IAM SAML OldC

Answer: C

Explanation:

Explanation

The AWS Documentation mentions the following

The AWS Documentation mentions the following

OIDC identity providers are entities in IAM that describe an identity provider (IdP) service that supports the OpenID Connect (OIDC) standard. You use an OIDC identity provider when you want to establish trust between an OIDC-compatible IdP-such as Google, Salesforce, and many others-and your AWS account

This is useful if you are creating a mobile app or web application that requires access to AWS resources, but you don't want to create custom sign-in code or manage your own user identities

Option A is invalid because in the security groups you would not mention this information/ Option C is invalid because SAML is used for federated authentication

Option D is invalid because you need to use the OIDC identity provider in AWS For more information on ODIC identity providers, please refer to the below Link:

https://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles

providers create oidc.html1 The correct answer is: Create an

OIDC identity provider in AWS
