Topic 1, Contoso, Ltd

Overview

Contoso, Ltd. is a manufacturing company that has offices worldwide. Contoso works with partner organizations to bring products to market.

Contoso products are manufactured by using blueprint files that the company authors and maintains.

Existing Environment

Currently, Contoso uses multiple types of servers for business operations, including the following:

- * File servers
- * Domain controllers
- * Microsoft SQL Server servers

Your network contains an Active Directory forest named contoso.com. All servers and client computers are joined to Active Directory.

You have a public-facing application named App1. App1 is comprised of the following three tiers:

- * A SQL database
- * A web front end
- * A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

Requirements

Planned Changes

Contoso plans to implement the following changes to the infrastructure:

- * Move all the tiers of Appl to Azure.
- * Move the existing product blueprint files to Azure Blob storage.
- * Create a hybrid directory to support an upcoming Microsoft Office 365 migration project.

Technical Requirements

Contoso must meet the following technical requirements:

- * Move all the virtual machines for Appl to Azure.
- * Minimize the number of open ports between the Appl tiers.
- * Ensure that all the virtual machines for Appl are protected by backups.
- * Copy the blueprint files to Azure over the Internet.
- * Ensure that the blueprint files are stored in the archive storage tier.
- * Ensure that partner access to the blueprint files is secured and temporary.
- * Prevent user passwords or hashes of passwords from being stored in Azure.
- * Use unmanaged standard storage for the hard disks of the virtual machines.
- * Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity.

Minimize administrative effort whenever possible.

User Requirements

Contoso identifies the following requirements for users:

Ensure that only users who are part of a group named Pilot can join devices to Azure AD.

Designate a new user named Admin1 as the service administrator of the Azure subscription.

Ensure that a new user named User3 can create network objects for the Azure subscription.

NEW QUESTION: 2

In an IP (Internet Protocol) spoofing attack, what field of an IP (Internet Protocol) packet does the attacker manipulate?

- A. The source port field
- B. The source address field
- C. The destination address field
- D. The version field

Answer: B

Health Review: Azure SQL Database

Scenario: ADatum identifies the following requirements for the Health Review application:

- * Ensure that sensitive health data is encrypted at rest and in transit.

- * Tag all the sensitive health data in Health Review. The data will be used for auditing.

Health Interface: Azure Cosmos DB

A Datum identifies the following requirements for the Health Interface application:

- * Upgrade to a data storage solution that will provide flexible schemas and increased throughput for writing data. Data must be regionally located close to each hospital, and reads must display be the most recent committed version of an item.

- * Reduce the amount of time it takes to add data from new hospitals to Health Interface.

- * Support a more scalable batch processing solution in Azure.

- * Reduce the amount of development effort to rewrite existing SQL queries.

Health Insights: Azure SQL Data Warehouse

Azure SQL Data Warehouse is a cloud-based enterprise data warehouse that leverages massively parallel processing (MPP) to quickly run complex queries across petabytes of data. Use SQL Data Warehouse as a key component of a big data solution.

You can access Azure SQL Data Warehouse (SQL DW) from Databricks using the SQL Data Warehouse connector (referred to as the SQL DW connector), a data source implementation for Apache Spark that uses Azure Blob Storage, and PolyBase in SQL DW to transfer large volumes of data efficiently between a Databricks cluster and a SQL DW instance.

Scenario: ADatum identifies the following requirements for the Health Insights application:

- * The new Health Insights application must be built on a massively parallel processing (MPP) architecture that will support the high performance of joins on large fact tables
