NEW QUESTION: 1

What are two security benefits of a Docker-based application?

- A.** natively secures access to secrets that are used by the running application
- B.** easier to patch because Docker containers include only dependencies that the application requires
- C.** allows for separation of application that traditionally run in the same host
- D.** prevents information leakage that can occur when unhandled exceptions are returned in HTTP responses
- E.** guarantees container images are secured and free of vulnerabilities

Answer: B,C
