NEW QUESTION: 1

When you create an assert in a test case, you can specify a Compare By rule of xml-identical or xml-similar. The rule designates the strictness of the comparison.

If you choose xml-similar, identify two conditions that will cause the comparison to fail.

A. The namespaces are different, but the namespace prefix is the same.

B. The namespaces are the same, but the namespace prefix is

different.

C. An element has the same child attributes, but they are in a different order.

D. An element has a different name, but the same child attributes are in the same order.

Answer: A

NEW QUESTION: 2

You are writing a Web application that processes room reservation requests. You need to verify that the room that a guest has selected is not already reserved by another guest. Which type of programming should you use to determine whether the room is still available when the request is made?

A. batch processing

B. multithreaded

C. server-side

D. client-side

Answer: C

Explanation:

For room availability we need to check a database located on a server.

NEW QUESTION: 3

Which choice below represents the most important first step in creating

a business resumption plan?

A. Performing a risk analysis

B. Planning recovery strategies

C. Analyzing the business impact

D. Obtaining senior management support

Answer: D

Explanation:

The business resumption, or business continuity plan, must have total, highly visible senior management support. Senior management must agree on the scope of the project, delegate resources for the success of the project, and support the timeline and training efforts. Source: Contingency Planning and Management, Contingency Planning 101, by Kelley Goggins, March 1999.
