NEW QUESTION: 1

Network segmentation provides which of the following benefits?

- A. High availability through redundancy
- B. Security through isolation
- C. Link aggregation
- D. Packet flooding through all ports

Answer: B

Explanation:

Explanation

Network segmentation in computer networking is the act or profession of splitting a computer network into subnetworks, each being a network segment. Advantages of such splitting are primarily for boosting performance and improving security through isolation.

Advantages of network segmentation:

Improved security: Broadcasts will be contained to local network. Internal network structure will not be visible from outside
Reduced congestion: Improved performance is achieved because on a segmented network there are fewer hosts per subnetwork, thus minimizing local traffic
Containing network problems: Limiting the effect of local failures on other parts of network
