NEW QUESTION: 1

Which of the following types of attack makes use of unfiltered user input as the format string parameter in the printf() function of the C language?

- A. buffer overflows
- B. format string vulnerabilities

- C. integer overflow
- D. None of the choices.
- E. command injection
- F. code injection

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Format string attacks are a new class of vulnerabilities recently discovered. It can be used to crash a program or to execute harmful code. The problem stems from the use of unfiltered user input as the format string parameter in certain C functions that perform formatting, such as printf(). A malicious user may use the %s and %x format tokens, among others, to print data from the stack or possibly other locations in memory. One may also write arbitrary data to arbitrary locations using the %n format token.

NEW QUESTION: 2

The use of a weight belt may improve safety during the performance of which of the following exercises?

- A. Back Barbell Squat performed with 75% of 10 RM
- B. Dumbbell curls performed with 100% of 6 RM
- C. Dumbbell curls performed with 75% of 10 RM
- D. Back Barbell Squat performed with 100% of 6 RM

Answer: D

NEW QUESTION: 3

It is a common practice to use a weight belt during heavy lifts to provide additional support and stability to the lower back. This is particularly true for exercises like the back squat and deadlift, where the load is heavy and the spine is under significant stress.

In the context of the question, the use of a weight belt is most beneficial for exercises that involve heavy lifting and a high degree of spinal loading. Among the options provided, the Back Barbell Squat performed with 100% of 6 RM (Option D) is the most appropriate choice. This is because the squat is a compound lift that places a significant load on the spine, and using a weight belt can help reduce the risk of injury by providing extra support.

Other options, such as Dumbbell curls (Options B and C), are not as demanding on the spine and therefore do not require a weight belt for safety. The Back Barbell Squat performed with 75% of 10 RM (Option A) is also a heavy lift, but the question specifically asks for the exercise where a weight belt may improve safety, and the 100% of 6 RM condition is more likely to necessitate such a belt.

Answer: D

D. [OpenID Connect](#) [Amazon Cognito](#)
E. [AWS SSO](#) [OpenID Connect](#)

Answer: A,E
