**NEW QUESTION: 3**

Which type of IPS can identify worms that are propagating in a network?

**A.** Policy-based IPS

**B.** Anomaly-based IPS

**C.** Reputation-based IPS

**D.** Signature-based IPS

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

Cisco's best-in-class anomaly detection feature detects worms by learning the "normal" traffic patterns of the network, and then scanning for anomalous behavior.

Fast-propagating network worms scan the network in order to infect other hosts. For each protocol or service, the anomaly detection program studies what is normal scanning activity, and accumulates this information in a threshold histogram and an absolute scanner threshold. The scanner threshold specifies the absolute scanning rate above which any source is considered malicious.

**NEW QUESTION: 4**

Which of the following is a benefit of using Amazon Route 53?  
A. It provides a single point of contact for DNS services.  
B. It provides a single point of contact for Amazon EMR.  
C. It provides a single point of contact for Amazon Mechanical Turk.  
D. It provides a single point of contact for Amazon ElastiCache.

**Answer: D**

Explanation:

Amazon Route 53 is a highly available and scalable cloud DNS web service. It provides a single point of contact for DNS services, making it easy to manage your domain name and route traffic to your applications. Amazon Route 53 is a managed service that handles the complex tasks of DNS, so you can focus on your business. It is highly available and scalable, and it integrates with other AWS services like Amazon S3 and Amazon EC2. Amazon Route 53 also provides advanced features like traffic steering and health checks, which allow you to optimize your DNS configuration and ensure that your applications are always available.
