#### **NEW QUESTION: 1**

Which two statements are correct about redundant trunk groups on EX Series switches? (Choose two.)

- A.** Redundant trunk groups load balance traffic across two designated uplink interfaces.
- B.** If the active link fails, then the secondary link automatically takes over.
- C.** Layer 2 control traffic is permitted on the secondary link.
- D.** Redundant trunk groups use spanning tree to provide loop-free redundant uplinks.

**Answer: B,C**

Explanation:

Explanation/Reference:

Explanation:

A: While data traffic is blocked on the secondary link, Layer 2 control traffic is still permitted. For example, an LLDP session can be run between two switches on the secondary link.

B: The redundant trunk group is configured on the access switch and contains two links: a primary or active link, and a secondary link. If the active link fails, the secondary link automatically starts forwarding data traffic without waiting for normal spanning-tree protocol convergence.

**NEW QUESTION: 2**

- A. SYSTEM
- B. EXAMPLE
- C. USERS
- D. SYSAUX

**Answer: C**

Explanation:

This table space is used to store permanent user objects and data. Like the TEMP table space, every database should have a table space for permanent user data that is assigned to users. Otherwise, user objects will be created in the SYSTEM table space, which is not good practice. In the preconfigured database, USERS is assigned the default table space, and space for all objects created by non-system users comes from this table space. For system users, the default permanent table space remains SYSTEM.

**NEW QUESTION: 3**

The master server catalog is being recovered to a new server. The administrator receives the message displayed below. Please insert the following media and run the volume configuration wizard or the vmupdate command to update the NetBackup database.

Host - train1 MediaID - GBP847 Barcode - GBP847S1

In the Administration Console, barcode GBP847S1 is associated with media ID P847S1.

How should the administrator proceed?

- A. Delete the tape and set the barcode rule accordingly, then re-inventory the library and run recovery
- B. Find the tape labeled P847S1, insert it into the robot, and then perform recovery
- C. Delete the tape and set the media ID generation rule accordingly, then re-inventory the library and run recovery
- D. Use bplabel to change the media ID, then re-inventory the library and perform recovery

**Answer: C**

**NEW QUESTION: 4**

Your network contains an Active Directory domain. The domain contains DNS servers that run Windows Server 2008 R2.

The network has two external links. One link connects to the Internet. The other link directly connects to the network of a partner company.

The partner company's network is not connected to the Internet.

You need to ensure that users on your network can access resources on the partner company's network. The solution must ensure that the users on your network can continue to access resources on the Internet.

Which two actions should you perform on the DNS servers? (Each correct answer presents a complete solution. Choose two.)

- A. Add a stub zone.
- B. Configure conditional forwarding.
- C. Add a trust anchor.
- D. Add a reverse lookup zone.
- E. Modify the root hints.

**Answer: B,E**
