**Answer: D**

#### **NEW QUESTION: 2**

- A. Import-ExchangeCertificate
- B. Set-ClientAccessServer
- C. New-ClientAccessArray
- D. New-ExchangeCertficiate

**Answer: B**

Explanation:

UNABLE TO ASSOCIATE SET-CLIENTACCESSSERVER WITH CERTIFICATE

ERROR D LOOKS LIKE A BETTER RESPONSE. IMPORT THE SSL CERTIFICATE AND THEN ASSIGN IT TO OUTLOOK 2013 Self-signed Certificate When you install Exchange 2013, a self-signed certificate is automatically configured on the Mailbox servers. A self-signed certificate is signed by the application that created it. The subject and the name of the certificate match. The issuer and the subject are defined on the certificate. This self-signed certificate is used to encrypt communications between the Client Access server and the Mailbox server. The Client Access server trusts the self-signed certificate on the Mailbox server automatically, so no third-party certificate is needed on the Mailbox server. When you install Exchange 2013, a self-signed certificate is also created on the Client Access server. This self-signed certificate will allow some client protocols to use SSL for their communications. Exchange ActiveSync and Outlook Web App can establish an SSL connection by using a self-signed certificate. Outlook Anywhere won't work with a self-signed certificate on the Client Access server. Self-signed certificates must be manually copied to the trusted root certificate store on the client computer or mobile device. When a client connects to a server over SSL and the server presents a self-signed certificate, the client will be prompted to verify that the certificate was issued by a trusted authority. The client must explicitly trust the issuing authority. If the client confirms the trust, then SSL communications can continue.

Note: By default, the digital certificate installed on the Mailbox server or servers is a self-signed certificate. You don't need to replace the self-signed certificate on the Mailbox servers in your organization with a trusted third-party certificate. The Client Access server automatically trusts the self-signed certificate on the Mailbox server and no other configuration is needed for certificates on the Mailbox server. Outlook 2013 When connecting to an Exchange server using Outlook 2013 you may encounter an SSL trust error.

This error occurs when the Exchange server is configured with a self-signed SSL certificate. Outlook makes connections to the Exchange server over HTTPS and therefore must trust the SSL certificate that is configured on the server, otherwise it will display those error messages to the end user.

To resolve the issue install a valid SSL certificate on the Exchange server from a trusted certificate authority.

See Exchange Server 2013 SSL certificates for more details on this as well as step by step instructions.
