NEW QUESTION: 1

When a snapshot has versions that are marked incremental or full, what will a deployment process do when it deploys using the snapshot?

- A. Deploy the first component version
- B. Deploy all versions in sequence from first to latest
- C. Deploy the latest component version
- D. Deploy all versions in sequence from latest to first

Answer: B

Explanation:

All version will be deployed, see step 4 below, and the latest version will be deployed last.

After you create a snapshot, you can deploy the snapshot to an environment.

Procedure

Note: A snapshot is a collection of specific versions of components and processes. Typically, a snapshot represents a set of component versions that are known to work together.

NEW QUESTION: 3

You are working as an ETL developer for a payroll company. You configure a SQL Server 2008 Integration Services (SSIS) package to use checkpoints.

The SSIS package truncates the dbo.Employee_Attendance table, loads the new employees in the dbo.Employee table, and then loads dbo.Employee_Attendance for a particular month.

The control flow for the package is shown in the Control Flow exhibit. (Click the Exhibit button.)

The data flow for the package is shown in the Data Flow exhibit. (Click the Exhibit button.)

The package fails at the Derived Column transformation within the data flow task.

You need to determine where the package execution will begin after you correct the errors and run the package again.

Where does the package execution begin?

- A. Load Emp_Attendance in the Data Flow task.
- B. Truncate Employee_Attendance table in the Execute SQL task
- C. Derived Column Transformation in the data Flow task
- D. Load Employee in the Data Flow task.

Answer: D
