NEW QUESTION: 1

Ramping down one supplier while ramping up a new supplier in an effort to cause the least disruption is called?

- A. De-sloping form of ramping down.
- B. Strategic reduction ramp down.
- C. Supplier reduction ramp down.
- D. Gradual transition ramp down.

Answer: D

Explanation:

Ramping down one supplier while ramping up a new supplier in an effort to cause the least disruption is called gradual transition. It is not De-sloping, Strategic reduction, or Supplier reduction which are fabricated terms.

NEW QUESTION: 2

Which statement best describes the DataFlux Integration Server?

- A. A third party server defined in the SAS metadata repository that allows you to build flows integrating multiple jobs and establishing job dependencies within the flow.
- B. An application interface that allows you to build dfPower Architect and dfPower Profile jobs specialized for data cleansing operations.
- C. A plug-in to SAS Data Integration Studio allowing you to design jobs specialized for data cleansing operations.
- D. An application server that executes service requests based on Simple Object Access Protocol (SOAP) to call dfPower Architect or dfPower Profile jobs.

Answer: D

NEW QUESTION: 3

A common cryptographical tool is the use of XOR. XOR the following binary values:

10110001

00111010

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The XOR gate is a digital logic gate that implements an exclusive or; that is, a true output (1/HIGH) results if one, and only one, of the inputs to the gate is true. If both inputs are false (0/LOW) or both are true, a false output results. XOR represents the inequality function, i.e., the output is true if the inputs are not alike otherwise the output is false. A way to remember XOR is "one or the other but not both".
