NEW QUESTION: 1

- A. Option D
- B. Option B
- C. Option A
- D. Option C

Answer: A

NEW QUESTION: 2

You can define the replication of data from the SAP CRM server to other systems.

Where is the corresponding replication model created?

- A. In the BDoc Modeler
- B. In the administration console
- C. In the Data Integrity Manager
- D. In the object management

Answer: B

NEW QUESTION: 3

Which two statements about a culture map are true? (Choose two.)

- A. It is used in the Seven Elements Framework.
- B. It is used to gain an understanding of the customer organization.
- C. It is used to gain an understanding of the BMC building blocks for customer segments, customer relationships, and value propositions.
- D. It is used in job mapping.
- E. It is used to evaluate the effectiveness of the internal organization that is run by the business architect.

Answer: B,C

NEW QUESTION: 4

You develop a SQL Server Integration Services (SSIS) package in a project by using the Project Deployment Model. It is regularly executed within a multi-step SQL Server Agent job.

You make changes to the package that should improve performance.

You need to establish if there is a trend in the durations of the next 10 successful executions of the package. You need to use the least amount of administrative effort to achieve this

goal.

What should you do?

A. Enable logging to the Application Event Log in the package control flow for the OnInformation event. After 10 executions, view the Application Event Log.

B. Enable logging to an XML file in the package control flow for the OnPostExecute event.

After 10 executions, view the XML file.

C. After 10 executions, view the job history for the SQL Server Agent job.

D. After 10 executions, in SQL Server Management Studio, view the Execution

Performance subsection of the All Executions report for the project.

Answer: D

Explanation:

The All Executions Report displays a summary of all Integration Services executions that have been performed on the server.

There can be multiple executions of the sample package. Unlike the Integration Services Dashboard report, you can configure the All Executions report to show executions that have started during a range of dates. The dates can span multiple days, months, or years.

The report displays the following sections of information.

* Filter

Shows the current filter applied to the report, such as the Start time range.

* Execution Information

Shows the start time, end time, and duration for each package execution. You can view a list of the parameter values that were used with a package execution, such as values that were passed to a child package using the Execute Package task.
