#### **NEW QUESTION: 1**

A developer writes three interceptor classes: AInt, BInt, and CInt. Each interceptor class defines an AroundInvoke method called interceptor. In the ejb-jar.xml descriptor, CInt is declared as the default interceptor.

FooBean is a stateless session bean with a local business interface Foo that declares a method Foo ():

```
\[email#160;protected\]  
\[email#160;protected\](AInt.class)  
12.public class FooBean Implements Foo {  
13.  
\[email#160;protected\] (BInt.class)  
\[email#160;protected\]  
16.public void foo () {}  
17.}
```

What is the interceptor order when the business method foo () is invoked?

- A. CInt, BInt
- B. BInt
- C. BInt, AInt, CInt
- D. CInt, AInt, BInt

**Answer: A**

Explanation:

The default Interceptor, CInt, comes first. The class interceptor AInt is excluded by @ExcludeClassInterceptors, so the Method Interceptor BInt would be next in order.

Note 1: By default the ordering of interceptors when invoking a method are

\* External interceptors \*\* Default interceptors, if present \*\*  
Class interceptors, if present \*\* Method interceptors, if present  
\*Bean class interceptor method Note 2: Annotation Type ExcludeClassInterceptors Used to exclude class-level interceptors for a business method or timeout method of a target class.
