### **NEW QUESTION: 1**

Which statement correctly describes Virtual Routing and Redundancy Protocol (VRRP) operation?

- A.** The master interface sends its physical MAC address in response to virtual interface IP address Address Resolution Protocol (ARP) requests
- B.** The current master interface originates frames using its

physical interface's Media Access Control (MAC) address as the source

C. A higher numeric priority value increases the time a virtual interface waits to attempt to become master

D. A non-owner mode Virtual Router ID (VRID) can have a master and only one backup interface

**Answer: B**

**NEW QUESTION: 2**

Which servers that reside in the data center require direct links to all other enterprise modules?

A. IP SLA servers

B. network management servers

C. DHCP servers

D. web servers

E. Active Directory servers

**Answer: B**

**NEW QUESTION: 3**

A new e-mail virus that uses an attachment disguised as a picture file is spreading rapidly over the Internet. Which of the following should be performed FIRST in response to this threat?

A. Quarantine all mail servers connected to the Internet

B. Block incoming Internet mail, but permit outgoing mail

C. Quarantine all picture files stored on file servers

D. Block all e-mails containing picture file attachments

**Answer: D**

Explanation:

Until signature files can be updated, incoming e-mail containing picture file attachments should be blocked.

Quarantining picture files already stored on file servers is not effective since these files must be intercepted before they are opened. Quarantine of all mail servers or blocking all incoming mail is unnecessary overkill since only those e-mails containing attached picture files are in question.
