NEW QUESTION: 1

Refer to the exhibit:

You are configuring an administrative domain implement so that devices can dynamically learn the RP?

A. BID1R-PIM

- B. Auto-RP
- C. SSM
- D. BSR

Answer: D

NEW QUESTION: 2

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: C,D

Explanation:

D: ExpandoObject Represents an object whose members can be dynamically added and removed at run time. / The ExpandoObject class enables you to add and delete members of its instances at run time and also to set and get values of these members. This class supports dynamic binding, which enables you to use standard syntax like sampleObject.sampleMember instead of more complex syntax like sampleObject.GetAttribute("sampleMember"). / You can pass instances of the ExpandoObject class as parameters. Note that these instances are treated as dynamic objects in C# and late-bound objects in Visual Basic. This means that you do not have IntelliSense for object members and you do not receive compiler errors when you call non-existent members. If you call a member that does not exist, an exception occurs.

Note:

* Visual C# 2010 introduces a new type, dynamic. The type is a static type, but an object of type dynamic bypasses static type checking. In most cases, it functions like it has type object. At compile time, an element that is typed as dynamic is assumed to support any operation. Therefore, you do not have to be concerned about whether the object gets its value from a COM API, from a dynamic language such as IronPython, from the HTML Document Object Model (DOM), from reflection, or from somewhere else in the program. However, if the code is not valid, errors are caught at run time.

NEW QUESTION: 3

Which reason is correct about carrying routes that originate outside your network in an EGP, such as BGP, rather than in your IGP, such as OSPF, EIGRP, or IS-IS?

- A. to prevent failures outside your network from impacting your internal network operation
- B. to provide a growth path for the core of your network
- C. to provide faster convergence to destinations outside your network

D. to provide better control over the distribution of the default route inside your network

Answer: A

Explanation:

Section: (none)
