Answer: D

NEW QUESTION: 3

- A. Option C
- B. Option B
- C. Option D
- D. Option A

Answer: D

Explanation:

One disadvantage of HSRP and VRRP is that only one router is in use, other routers must wait for the primary to fail because they can be used. However, Gateway Load Balancing Protocol (GLBP) can use of up to four routers simultaneously. In GLBP, there is still only one virtual IP address but each router has a different virtual MAC address. First a GLBP group must elect an Active Virtual Gateway (AVG). The AVG is responsible for replying ARP requests from hosts/clients. It replies with different virtual MAC addresses that correspond to different routers (known as Active Virtual Forwarders - AVFs) so that clients can send traffic to different routers in that GLBP group (load sharing).

NEW QUESTION: 4

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2 and has the DHCP Server server role installed. Server1 has an IPv6 scope named Scopel.

You implement an additional DHCP server named Server2 that runs Windows Server 2012 R2.

You need to provide high availability for Scopel. The solution must minimize administrative effort.

What should you do?

- A. Install and configure Failover Clustering on Server1 and

Server2.

B. Configure DHCP failover on Server1.

C. Install and configure Network Load Balancing (NLB) on Server1 and Server2.

D. Create a scope on Server2.

Answer: D
