NEW QUESTION: 1

HOTSPOT

Your network contains two Active Directory sites named Site1 and Site2. Both sites contain an equal number of users. Each site contains two Exchange Server 2013 Mailbox servers. You need to recommend a high-availability solution that meets the following requirements:

- * If a single Mailbox server fails, the active mailbox database copies on that server must fail over to a Mailbox server in the same site.
- * If both Mailbox servers in the same site fail, the active mailbox databases copies must be switched over to the other site manually.
- * If a WAN link fails, multiple copies of the same mailbox

database must not be activated in both sites simultaneously. How should you configure the database availability groups (DAGs)? (To answer, configure the appropriate options in the answer area.)

Answer:

Explanation:

NEW QUESTION: 2

Scenario:

CGE decided to virtualize its server workloads and provide a virtual solution to all of its end users. CGE is looking for an image management process that is scalable, but would like to limit infrastructure requirements.
