- A. sys.dm_db_stats_properties
- B. sys.dm_os_sys_info
- C. sys.dm_dbindex_operational_stats
- D. sys.dm_db_index_usage_stats

Answer: D

Explanation:

Explanation

The sys.dm_db_index_usage_stats returns counts of different types of index operations and the time each type of operation was last performed.

The user_updates counter indicates the level of maintenance on the index caused by insert, update, or delete operations on the underlying table or view. You can use this view to determine which indexes are used only lightly by your applications. You can also use the view to determine which indexes are incurring maintenance overhead. You may want to consider dropping indexes that incur maintenance overhead, but are not used for queries, or are only infrequently used for queries.
