**Answer:**

Explanation:

Explanation

Step 1: Encrypt the on-premises VHD by using BitLocker without a TPM. Upload the VM to Azure Storage Step 2: Run the Azure PowerShell command Set-AzureRMVMOsdisk To use an existing disk instead of creating a new disk you can use the Set-AzureRMVMOsdisk command.

Example:

```
$osDiskName = $vmname+'_osDisk'  
$osDiskCaching = 'ReadWrite'  
$osDiskVhdUri =  
"https://$stname.blob.core.windows.net/vhds/"+$vmname+"_os.vhd  
"
```

```
$vm = Set-AzureRmVMOSDisk -VM $vm -VhdUri $osDiskVhdUri -name  
$osDiskName -Create Step 3: Run the Azure PowerShell command  
Set-AzureRmVMDiskEncryptionExtension Use the  
Set-AzVMDiskEncryptionExtension cmdlet to enable encryption on  
a running IaaS virtual machine in Azure.
```

Incorrect:

Not TPM: BitLocker can work with or without a TPM. A TPM is a tamper resistant security chip on the system board that will hold the keys for encryption and check the integrity of the boot sequence and allows the most secure BitLocker implementation. A VM does not have a TPM.
