Explanation:

### **NEW QUESTION: 2**

After a user reports slow computer performance, a systems administrator detects a suspicious file, which was installed as part of a freeware software package.

The systems administrator reviews the output below:

Based on the above information, which of the following types of malware was installed on the user's computer?

- A. Keylogger
- B. Spyware
- C. Worm
- D. RAT
- E. Bot

**Answer: D**

Explanation:

Explanation

A RAT's installation mechanism is usually attached to a legitimate program. RATs are commonly hidden within games or other small programs, as well as in email attachments that users download. Imposters are able to customize RAT features, such as when and where to launch the Trojan. Intruders eventually trigger the server program on the victim's computer. Then, the RAT runs invisibly on the victim's computer and allows the intruder to gain remote access and control of the infected computer.

### **NEW QUESTION: 3**
