## **NEW QUESTION: 2**

Note: This question is a part of a series of questions that present the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

You have a Microsoft SQL Server database that contains the following tables.

The following columns contain data information:

- \* Date[Month] in the mmyyyy format
- \* Date[Date\_ID] in the ddmmyyyy format
- \* Date[Date\_name] in the mm/dd/yyyy format
- \* Monthly\_returns[Month\_ID] in the mmyyyy format

The Order table contains more than one million rows.

The Store table has relationship to the Monthly\_returns table on the Store\_ID column. This is the only relationship between the tables.

You plan to use Power BI desktop to create an analytics solution for the data.

End of repeated scenario.

You are modifying the model to report on the number of order. You need to calculate the number of orders.

What should you do?

- A. Create a calculated measure that uses the COUNTA(Order\_ID) DAX formula.
- B. Create a calculated column that uses the COUNTA (Order\_ID) DAX formula.
- C. Create a calculated column that uses the SUM (Order\_ID) DAX formula.
- D. Create a calculated measure that uses the SUM (Order\_ID) DAX formula.

**NEW QUESTION: 3**

A network design engineer is asked to design a SAN for a company. Which two underlying principles of SAN design should be considered? (Choose two.)

- A. security management, preferential network security
- B. fault isolation, consolidation while maintaining isolation
- C. short and long term port density and topology requirements
- D. future growth in LAN infrastructure
- E. scalability of LAN infrastructure, reduced Ethernet QoS complexity

**Answer: B,C**

Explanation:

Section: (none)

Explanation/Reference:

Explanation:

Principles of SAN Design

The underlying principles of SAN design are relatively straightforward: plan a network topology that can handle the number of ports necessary now and into the future; design a network topology with a given end- to-end performance and throughput level in mind, taking into account any physical requirements of a design (for example, whether the data center is or will in the future be located on multiple floors of a building or in multiple buildings or locations); and provide the necessary connectivity with remote data centers to handle the business requirements of business continuity and disaster recovery.

These underlying principles fall into five general categories:

- \* Port density and topology requirements-Number of ports required now and in the future
- \* Device performance and oversubscription ratios-Determination of what is acceptable and what is unavoidable
- \* Traffic management-Preferential routing or resource allocation
- \* Fault isolation-Consolidation while maintaining isolation
- \* Control plane scalability-Reduced routing complexity

**NEW QUESTION: 4**

Sie planen, eine neue Microsoft SQL Server-Instanz nur mit dem SQL Server-Modul und dem SQL Agent-Dienst zu installieren. Mit dem SQL Server-Installationsassistenten generieren Sie eine Datei, die die Konfigurationen enthält. Sie speichern keine SQL Server-Modul- oder SQL Agent-Dienstkontoinformationen in

der Datei.

Sie müssen SQL Server über eine Befehlszeilenschnittstelle installieren.

Wie solltest du den Befehl ausführen? Wählen Sie zum Beantworten die entsprechenden Befehlssegmente im Antwortbereich aus.

**Answer :**

Explanation:

Explanation:

Following are some examples on how to use the configuration file:

To specify passwords at the command prompt instead of in the configuration file:

Setup.exe /SQLSVCPASSWORD="\*\*\*\*\*"

/AGTSVCPASSWORD="\*\*\*\*\*" /ASSVCP To specify the configuration file at the command prompt:

Setup.exe /ConfigurationFile=MyConfigurationFile.INI
