NEW QUESTION: 1

Which two statements about SAN zoning on Cisco Nexus switches are true? (Choose two.)

- A. Zone configuration changes are nondisruptive.
- B. Only one zone set can be activated at any time.
- C. A zone can only be a member one zone set.
- D. Zoning is enforced by examining the destination ID field.
- E. Zoning must be administered from the primary SAN switch in the fabric.
- F. Devices can only belong to one zone.

Answer: A,B

Explanation:

Explanation/Reference:

Explanation:

A zone set can be activated or deactivated as a single entity across all switches in the fabric. Only one zone set can be activated at any time. If zoning is not activated, all devices are members of the default zone. If zoning is activated, any device that is not in an active zone (a zone that is part of an active zone set) is a member of the default zone. Zoning can be

administered from any switch in the fabric. When you activate a zone (from any switch), all switches in the fabric receive the active zone set. Additionally, full zone sets are distributed to all switches in the fabric, if this feature is enabled in the source switch.

NEW QUESTION: 2

Which of the following statements describe the network shown in the graphic? (Choose two.)

What are the proper statements?. (Choose two)

- A. There are four broadcast domains in the network.
- B. There are seven collision domains in the network.
- C. There are six broadcast domains in the network.
- D. There are five collision domains in the network.
- E. There are two broadcast domains in the network.
- F. There are four collision domains in the network.

Answer: B,E

NEW QUESTION: 3

You are employed as a network administrator at ABC.com. ABC.com has an active directory domain named ABC.com all servers including domain controllers on the ABC.com network have Windows Server

2012 R2 installed. ABC.com has its headquarters in London and an office in Paris.

The London Office has a domain controller named server1, which is configured as a writeable domain controller that servers as a Global catalog server and a DNS server.

Server1 is configured to host an Active Directory-integrated zone for ABC.com The Paris office has a Read-Only domain controller (RODC) named server2 which servers as a Global catalog server. After installing the DNS server role on server2, you want to make sure that the ABC.com zone is replicated to server2 via active directory replication.

Which of the following actions should you take?

- A. You should consider making use of repadmin.exe to configure replication
- B. You should consider making use of Active DirectorySchema To configure replication
- C. You should consider making use of replmon.exe to configure replication.
- D. You should consider making use of Active Directory Sites and Services to Configured replication

Answer: D

Explanation:

Explanation/Reference:

Explanation:

NEW QUESTION: 4

- A. snapmirror.access
- B. options snapmirror.allow host =
- C. snapmirror.destination
- D. options snapmirror.access host =

Answer: D

Explanation:

The snapmirror.access option is the preferred method for controlling snapmirror access on a snapmirrorsource filer.
