NEW QUESTION: 1

A packet-encapsulated NVGRE is sent from one virtual switch to another virtual switch. When the DF bit of the outer IP header is set, the packet is dropped by the switch-X between them because the frame size is bigger than the MTU size of interfaces of the switch-X.

Which action is the correct one to fix this problem without impacting performance?

- A.** Expand the MTU configuration of the switch-X to accept the biggest NVGRE frames.
- B.** Change the configuration of virtual switches not to set the DF bit.
- C.** Change the configuration of virtual switches to use VXLAN instead of NVGRE.
- D.** Change the configuration of virtual switches not to send bigger NVGRE frames than the switch-X interface MTU.

Answer: A

NEW QUESTION: 2

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: C

NEW QUESTION: 3

SIMULATION

Scenario:

You work for SWITCH.com. They have just added a new switch (SwitchB) to the existing network as shown in the topology diagram.

RouterA is currently configured correctly and is providing the routing function for devices on SwitchA and SwitchB. SwitchA is currently configured correctly, but will need to be modified to support the addition of SwitchB. SwitchB has a minimal configuration. You have been tasked with completing the needed configuring of SwitchA and SwitchB. SwitchA and SwitchB use Cisco as the enable password.

Configuration Requirements for SwitchA

The VTP and STP configuration modes on SwitchA should not be modified.

- * SwitchA needs to be the root switch for vlans 11, 12, 13, 21, 22 and 23. All other vlans should be left at their default values.

Configuration Requirements for SwitchB

- * Vlan 21

Name: Marketing

will support two servers attached to fa0/9 and fa0/10

- * Vlan 22

Name: Sales

will support two servers attached to fa0/13 and fa0/14

- * Vlan 23

- o Name: Engineering

- o will support two servers attached to fa0/15 and fa0/16

- * Access ports that connect to server should transition immediately to forwarding state upon detecting the connection of a device.

- * SwitchB VTP mode needs to be the same as Switch A.

- * SwitchB must operate in the same spanning tree mode as SwitchA

- * No routing is to be configured on SwitchB

- * Only the SVI vlan 1 is to be configured and it is to use address 192.168.1.11/24

Inter-switch Connectivity Configuration Requirements

- * For operational and security reasons trunking should be unconditional and Vlans 1, 21, 22 and 23 should be tagged when traversing the trunk link.

- * The two trunks between SwitchA and SwitchB need to be

configured in a mode that allows for the maximum use of their bandwidth for all vlans. This mode should be done with a non-proprietary protocol, with SwitchA controlling activation. * Propagation of unnecessary broadcasts should be limited using manual pruning on this trunk link.

NEW QUESTION: 4

Your network contains an Active Directory domain named contoso.com. The domain contains 500 computers that run Windows 7. Some of the computers are used by multiple users.

You plan to refresh the operating system of the computers to Windows 10.

You need to retain the personalization settings to applications before you refresh the computers. The solution must minimize network bandwidth and network storage space.

Which command should you run on the computer? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
