It perfectly suits for IT workers, So passing the PT0-002 certifications is the key way for them.

NEW QUESTION: 1

A server integrator has selected Virtual Connect Flex-10/10D modules as interconnect modules for HP BladeSystem Enclosures. Blade servers will use Fibre Channel over Ethernet (FCoE) for their remote storage. The integrator is now discussing the upstream connectivity requirements with LAN and SAN administrators.

Which solution should the integrator choose to connect to the Virtual Connect modules?

- A.** Ethernet switches that support 8 Gbps Ethernet
- B.** Ethernet switches that support FCoE
- C.** SAN switches that support FCoE tunneling
- D.** SAN switches that support N-Port ID Virtualization (NPIV)

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Since VC 4.01, Virtual Connect provides the ability to pass FCoE to an external FCoE capable network switch.

NEW QUESTION: 2

An administrator wants to enable policy based flexible mandatory access controls on an open source OS to prevent abnormal application modifications or executions. Which of the following would BEST accomplish this?

- A. IPTables firewall
- B. HIPS
- C. Access control lists
- D. SELinux

Answer: D

NEW QUESTION: 3

In a database management system (DBMS), what is the "cardinality"?

- A. The set of allowable values that an attribute can take.
- B. The number of relations in a database.
- C. The number of columns in a relation.
- D. The number of rows in a relation.

Answer: D

Explanation:

Explanation/Reference:

Explanation:

In database design, the cardinality or fundamental principle of one data table with respect to another is a critical aspect. The relationship of one to the other must be precise and exact between each other in order to explain how each table links together.

In the relational model, tables can be related as any of "one-to-many" or "many-to-many." This is said to be the cardinality of a given table in relation to another.

Incorrect Answers:

B: The number of columns in a relation would be the size of the key. It is not the cardinality of the relation.

C: Cardinality concerns the relation between two tables, not allowable attributes.

D: Cardinality concerns one specific relation between two tables, not the number of relations in a database.

NEW QUESTION: 4

You are asked to provide a customer with centralized monitoring of multiple EMC Data Domain systems. The customer needs to

track and forecast aggregated Data Domain system performance and growth, historically. Additionally, the customer wants to receive real-time, automated alerting to any configuration or policy changes across all Data Domain systems.

Which recommended solution meets these requirements?

- A. Data Domain System Manager
- B. Data Protection Advisor
- C. Data Domain Management Center
- D. Backup and Recovery Manager

Answer: B
