**NEW QUESTION: 1**

Which three statements are true regarding how Autonomous Database provides data security? (Choose three.)

- A. Users are given OS logons or SYSDBA privileges to prevent phishing attacking.
- B. Oracle automatically applies security updates to ensure data is not vulnerable to known attack vectors.
- C. Network connections from clients to Autonomous Database are encrypted using the client credentials wallet.
- D. Data is encrypted at rest using transparent data encryption.

**Answer: B,C,D**

Explanation:

In Autonomous Database, Oracle encrypt your data everywhere-whether in motion in SQL'Net traffic, and at rest in tablespaces and backups by default, each Autonomous Database service is automatically configured to use industry-standard TLS 1.2 to encrypt data in transit between the database service and clients or applications. Required client certificates and networking information are automatically packaged for the service consumer when the service is provisioned Oracle encrypt data at rest, by default the Autonomous Database is automatically encrypted using Oracle Transparent Data Encryption in tablespaces and backups

**NEW QUESTION: 2**

You are planning the deployment of two Mediation Servers in the New York office.

You need to identify the minimum number of network ports that must be configured on each Mediation Server. The solution must meet the Enterprise Voice requirements.

How many ports should you identify?

To answer, configure the appropriate number of network ports for the component in the answer area.

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

<http://technet.microsoft.com/en-us/library/gg398399.aspx>

Note: The Mediation Server translates signaling and, in some configurations, media between your internal Lync Server 2013, Enterprise Voice infrastructure and a public switched telephone network (PSTN) gateway or a Session Initiation Protocol (SIP) trunk. On the Lync Server 2013 side, Mediation Server listens on a single mutual TLS (MTLS) transport address. On the gateway side, Mediation Server listens on all associated listening ports associated with trunks defined in the Topology document. All qualified gateways must support TLS, but can enable TCP as well. TCP is supported for gateways that do not support TLS. The main functions of the Mediation Server are as follows: - Encrypting and decrypting SRTP on the Lync Server side - Translating SIP over TCP (for gateways that do not support TLS) to SIP over mutual TLS - Translating media streams between Lync Server and the gateway peer of the Mediation Server - Connecting clients that are outside the network to internal ICE components, which enable media traversal of NAT and firewalls - Acting as an

intermediary for call flows that a gateway does not support, such as calls from remote workers on an Enterprise Voice client - In deployments that include SIP trunking, working with the SIP trunking service provider to provide PSTN support, which eliminates the need for a PSTN gateway The following figure shows the signaling and media protocols that are used by the Mediation Server when communicating with a basic PSTN gateway and the Enterprise Voice infrastructure.
