NEW QUESTION: 1

If the 1-year forward rates for years 1,2,3 and 4 are 2%, 3%, 4% and 5% respectively, what is the zero coupon spot rate for 4 years

- A. 4%
- B. 5%
- C. 3.50%
- D. 3.49%

Answer: D

Explanation:

Explanation

The zero coupon spot rate for 4 years can be calculated as = $(1.02*1.03*1.04*1.05)$

Related Posts(1/4) - 1 = 3.49%, which is the correct answer. (3.50% is just the mathematical average of the rates for the four years and is not correct, even though close.)

NEW QUESTION: 2

A customer has a Power 740 with 16 cores and 64GB RAM, running an Oracle database. The server is attached to an EXP24S with 20 disks 300GB 10K RPM and has been experiencing performance issues. After an analysis there were some findings:

Average CPU usage for the database is 30%

Average Memory usage is 60%

High I/O waits are being experienced, around 50% of total CPU

An Oracle sales representative ran a POC of an Exadata X4-2

Half Rack to help with the performance issues.

The performance on Exadata was better than the existing solution, so the customer called IBM, considering a migration to a new Oracle solution.

Which response is appropriate to defend the IBM solution?

A. Exadata X4-2 Half Rack has four servers with two sockets each. It should be compared with the performance of a POWER 770 which can also scale up to eight sockets. IBM can propose an upgrade scenario to even move partitions without downtime with LPM.

B. Exadata is a solution comprised of servers, disk storage, flash storage, networking and software. Your server is apparently fine, but there might be a problem with storage. IBM can propose a faster storage solution, allowing you to keep the server and optimize your costs.

C. Exadata might have run the Oracle database faster due to the fact that it is powered by Oracle SPARC T5 processors which were designed for Oracle software. On the other hand, other

workloads will definitely run slower, so you should stick to the existing solution for a balanced performance across your environment.

D. Exadata is comprised of a cluster of servers connected by Infiniband. You are comparing this to a single server. IBM can propose a second server with an Infiniband network to address this issue.

Answer: A

NEW QUESTION: 3

Which statement is a benefit of using Cisco IOS IPS?

A. It supports the complete signature database as a Cisco IPS sensor appliance.

B. It uses the underlying routing infrastructure to provide an additional layer of security.

C. The signature database is tied closely with the Cisco IOS image.

D. It works in passive mode so as not to impact traffic flow.

Answer: B

http://www.cisco.com/en/US/prod/collateral/iosswrel/ps6537/ps6586/ps6634/product_data_sheet0900aecd80313 Product Overview In today's business environment, network intruders and attackers can come from outside or inside the network.

They can launch distributed denial-of-service attacks, they can attack Internet connections, and they can exploit network and host vulnerabilities. At the same time, Internet worms and viruses can spread across the world in a matter of minutes.

There is often no time to wait for human intervention-the network itself must possess the intelligence to recognize and mitigate these attacks, threats, exploits, worms and viruses.

Cisco IOS Intrusion Prevention System (IPS) is an inline, deep-packet inspection-based solution that enables Cisco IOS Software to effectively mitigate a wide range of network attacks. While it is common practice to defend against attacks by inspecting traffic at data centers and corporate headquarters, distributing the network level defense to stop malicious traffic close to its entry point at branch or telecommuter offices is also critical.

Cisco IOS IPS: Major Use Cases and Key Benefits

IOS IPS helps to protect your network in 5 ways:

Key Benefits:

- * Provides network-wide, distributed protection from many attacks, exploits, worms and viruses exploiting vulnerabilities in operating systems and applications.

- * Eliminates the need for a standalone IPS device at branch and telecommuter offices as well as small and medium-sized business networks.

- * Unique, risk rating based signature event action processor

dramatically improves the ease of management of IPS policies.

- * Offers field-customizable worm and attack signature set and event actions.
- * Offers inline inspection of traffic passing through any combination of router LAN and WAN interfaces in both directions.
- * Works with Cisco IOS Firewall, control-plane policing, and other Cisco IOS Software security features to protect the router and networks behind the router.
- * Supports more than 3700 signatures from the same signature database available for Cisco Intrusion Prevention System (IPS) appliances.
