Answer: C

Explanation:

<http://technet.microsoft.com/en-us/library/jj205011.aspx>

Reference: Export-CsRgsConfiguration

Export-CsRgsConfiguration

Detailed Description

The Export-CsRgsConfiguration cmdlet and the

Import-CsRgsConfiguration cmdlet enable you to export data

about your current implementation of the Response Group application (including such things as workflows, queues, agent groups, holiday sets and business hours, as well as audio files and service configuration settings) and then later import (or re-import) that information. This can be extremely useful in a

disaster recovery scenario (for example, in a case where the server hosting the Response Group application has failed) or if you simply need to transfer the Response Group application to a different pool.

Note that the `Export-CsRgsConfiguration` cmdlet and the `Import-CsRgsConfiguration` cmdlet are designed to work only with Lync Server 2013.

If you want to migrate Response Group data from Microsoft Lync Server 2010 to Lync Server 2013, you should use the `Move-CsRgsConfiguration` cmdlet instead.

```
Export-CsRgsConfiguration -Source  
"ApplicationServer:atl-rgs-001.litwareinc.com" -FileName "C:  
\Exports\Rgs.zip"
```

To return a list of all the role-based access control (RBAC) roles this cmdlet has been assigned to (including any custom RBAC roles you have created yourself), run the following command from the Windows PowerShell command-line interface prompt:

```
Get-CsAdminRole | Where-Object {$_.Cmdlets -match  
"Export-CsRgsConfiguration"}
```

Lync Server Control Panel: The functions carried out by the `Export-CsRgsConfiguration` cmdlet are not available in the Lync Server Control Panel.
